"RZ2AU" Utility Positive Displacement Flowmeter

- *Electronic sensing of rotary piston eliminates all rotating shafts and seals found in industrial meters*
- *± .15% accuracy over flow range*
- *One moving part eliminates regular maintenance needs*

Anderson's RZU series flowmeter is a utility version of the industry accepted Accurate RZ series sanitary flowmeter. A lack of polish has made this rugged design suitable for use on corn sweeteners, oils and other products which do not require a 3A approved flowmeter. The RZ2AU provides the same single moving part design and the same high accuracy performance of its sanitary counterpart making it an attractive replacement for maintenance prone mechanical meters. Measurement is based on the principle of a chamber and rotating piston which create several internal chambers which are alternately filling and emptying as the piston moves in a circular path within the chamber, sensing of the

pistons position and movement provides the information necessary to measure the exact volume of liquid which has passed through the flowmeter. Measuring accuracy of $\pm .15\%$ over operational range is achieved through quality manufacturing of a proven precision design. Coupling the simplicity of the measuring chamber with a fully electronic transducer, the RZ2AU can provide years of maintenance free, accurate service.
